## IN THE CLAIMS:

1. (Currently Amended) A fiber reinforced plastic pipe reduced in thickness and increased in diameter by pultrusion process, comprising

a fiber bundle spun and aligned in a longitudinal direction, and circumferential reinforced fiber sheet provided <u>at least either</u> on an outer surface layer <u>or on an inner surface layer</u> thereof.

2. (Original) A fiber reinforced plastic pipe reduced in thickness and increased in diameter by pultrusion process, comprising

a fiber bundle spun and aligned in a longitudinal direction, and

circumferential reinforced fiber sheet provided at least either on an outer surface layer or on an inner surface layer thereof, wherein

the pipe has a slit, capable of being reduced in diameter along the circumference, provided in the longitudinal direction, such that said fiber reinforced plastic pipe can be inserted into a metal pipe.

3. (Previously Presented) The fiber reinforced plastic pipe according to claim1 or 2, wherein

a tensile elasticity of fibers forming said fiber bundle is 196 GPa or more.

4. (Previously Presented) The fiber reinforced plastic pipe according to claim1 or 2, wherein

a tensile elasticity of fibers forming said circumferential reinforced fiber sheet is 58.8 GPa or more.

5. (Previously Presented) The fiber reinforced plastic pipe according to claim1 or 2, wherein

a basis weight (FAW) of said circumferential reinforced fiber sheet is in the range of 100 g/m<sup>2</sup> to 600 g/m<sup>2</sup>.

6. (Previously Presented) The fiber reinforced plastic pipe according to claim 1 or 2, wherein

a thickness of said circumferential reinforced fiber sheet is in the range of 0.05 mm to 1.0 mm.

7. (Original) A power transmission shaft comprising a metal joint element and a metal pipe jointed to each other, wherein

the shaft further comprises a fiber reinforced plastic pipe inserted into said metal pipe, said fiber reinforced plastic pipe being reduced in thickness and increased in diameter by pultrusion process, comprising a fiber bundle spun and aligned in a longitudinal direction, and circumferential reinforced fiber sheet provided at least either on an outer surface layer or on an inner surface layer thereof.

8. (Original) A power transmission shaft comprising a metal joint element and a metal pipe jointed to each other, wherein

the shaft further comprises a fiber reinforced plastic pipe inserted into said metal pipe, said fiber reinforced plastic pipe being reduced in thickness and increased in diameter by pultrusion process, comprising a fiber bundle spun and aligned in a

longitudinal direction, and circumferential reinforced fiber sheet provided at least either on an outer surface layer or on an inner surface layer, the pipe having a slit, capable of being reduced in diameter along the circumference, provided in the longitudinal direction.

- 9. (Original) The power transmission shaft according to claim 8, wherein the slit has a width of 0.01% or more and 40% or less of the outer circumference thereof in a natural state.
- 10. (Original) The power transmission shaft according to claim 8 or 9, wherein said slit has a bias angle within ±30 degrees with respect to an axial direction of said fiber reinforced plastic pipe.
- 11. (Original) The power transmission shaft according to claim 8, wherein a value of  $D_1/D_2$  is greater than 1 and equal to 1.3 or less, where  $D_1$  is an outer diameter of said fiber reinforced plastic pipe and  $D_2$  is an inner diameter of said metal pipe.
- 12. (Previously Presented) The power transmission shaft according to claim 7 or 8, wherein

a tensile elasticity of fibers forming said fiber bundle is 196 GPa or more.

13. (Previously Presented) The power transmission shaft according to claim 7 or 8, wherein

a tensile elasticity of fibers forming said circumferential reinforced fiber sheet is 58.8 GPa or more.

14. (Previously Presented) The power transmission shaft according to claim 7 or 8, wherein

a basis weight (FAW) of said circumferential reinforced fiber sheet is in the range of  $100 \text{ g/m}^2$  to  $600 \text{ g/m}^2$ .

15. (Previously Presented) The power transmission shaft according to claim 7 or 8, wherein

a thickness of said circumferential reinforced fiber sheet is in the range of 0.05 mm to 1.0 mm.

- 16. (Original) The power transmission shaft according to claim 7 or 8, wherein said fiber reinforced plastic pipe has a layered structure of 20 layers or less.
- 17. (Original) The power transmission shaft according to claim 7 or 8, wherein a value of FL/PL is 0.1 or more and 1.0 or less, where PL is a length of said metal pipe and FL is a length of said fiber reinforced plastic pipe.
- 18. (Original) The power transmission shaft according to claim 7 or 8, wherein a value of t<sub>2</sub>/t<sub>1</sub> is 0.01 or more and 10 or less, where t<sub>1</sub> is a thickness of said metal pipe and t<sub>2</sub> is a thickness of said fiber reinforced plastic pipe.

- 19. (Original) The power transmission shaft according to claim 7 or 8, wherein said fiber reinforced plastic pipe is fixed to said metal pipe by reducing said metal pipe in diameter along the outer circumference by plastic-working, with said fiber reinforced plastic pipe being inserted in said metal pipe.
  - 20. (Original) The power transmission shaft according to claim 7 or 8, wherein said fiber reinforced plastic pipe is fixed to said metal pipe with an adhesive.
- 21. (Original) The power transmission shaft according to claim 20, wherein a recessed portion for accommodating adhesive is provided at least on any one of an outer circumference of said fiber reinforced plastic pipe or an inner circumference of said metal pipe.
